## New! True Match® Firmware 4.0 (Camera)

Burbank, CA – Kino Flo is pleased to announce the release of **True Match® Firmware 4.0** for its LED family line of softlight fixtures. With advanced Color Science LED technology, new firmware features include **Camera LUT**, **Color Space**, **CIE xy** and **FX (Effects) DMX** control. For those that want to download the Beta version, it will be available April 12th at [www.kinoflo.com/TrueMatch](http://www.kinoflo.com/TrueMatch).

The **Camera LUT** is a way of harmonizing white Kelvin reading from a camera to Kino Flo LED light fixtures. Camera settings include **Arri Alexa**, **Sony Venice**, **Panavision DXL**, **Panasonic Varicam** and more to follow.

**Color Space** defines the RGB color space as a means of matching color points between manufacturers. Defining the Color Space takes the guess work out of post-production workflow and color grading. Color Space options include: **rec 709/sRGB**, **P3 D65**, **rec 2020**, **ESTA E1.54**.

**CIE xy** mode determines the color displayed by its CIE xy coordinates. For example, with the use of a color meter like the Sekonic C-800, user can obtain a CIE xy reading from another manufacturer's light source that has a CIE xy function and input the CIE xy coordinates into a Kino Flo LED fixture to get an approximate match.

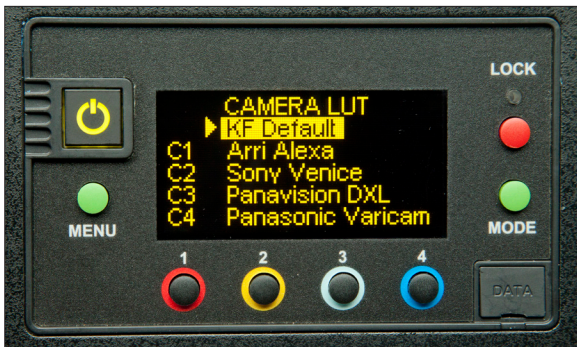

**FX (Effects) DMX** control available for popular effects such as **Candle**, **Fire**, **TV**, **Police**, **Lightning**, **Paparazzi**, **Pulse** and **Scroll**. When on the desired effect, there are several pre-sets as well as control parameters that can be altered manually or via DMX control.

True Match® Firmware 4.0 available for download in June 2019 at [www.kinoflo.com/TrueMatch](http://www.kinoflo.com/TrueMatch) for the following products:

- Select LED controller model 150X
- FreeStyle LED controller model 151X & 152X
- FreeStyle/4 LED controller model 140X
- Celeb models 250, 450, 450Q, 850
- Diva-lite models 20, 21, 30, 31, 41

### True Match Firmware 4.0 New Features:

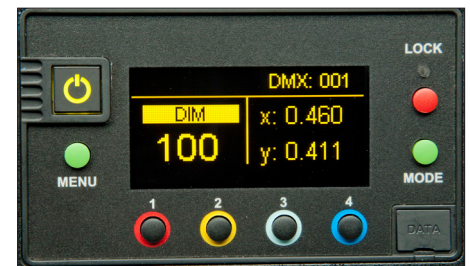

- Camera LUT
- Color Space RGB
- CIE xy coordinates
- FX (Effects) DMX Control
